Doing Business with Accutek

Accutek Testing Laboratory provides clients with testing services that deliver fast and accurate results. Our project life cycle process was developed to make our clients' experience as easy as possible.

Outlined below are the 12 simple steps of the testing process:

1. Sign Non-Disclosure Agreement between Accutek and Client.
2. Identify products to be tested with pictures for clarification.
3. Identify "worst case scenario for strength" of each product line.
4. Determine supplemental tests normally requested by the USFDA.
5. Determine quantities of each test and test environment.
6. Determine predicate test requirements (if any).
7. Provide quote to client.
8. Receive purchase order, deposit (electronic) and parts.
9. Completion of all tests (TBD*).
10. Receive electronic payment for testing.
11. Send preliminary reports to client within 3 days of test completion.
12. Send final test reports electronically (PDF) to client.

*Completion time is best case: Subject to fatigue frame availability

Call Accutek today to discuss your testing needs.

For over 20 years, major companies across industries, including aerospace, medical and manufacturing, have turned to Accutek for their product conformance, materials identification, and failure analysis needs. Accutek's engineering professionals and full-service testing facility provide critical knowledge, personalized service and timely delivery of your testing requirements. Accutek offers Mechanical, Metallurgical, Fatigue, Failure Analysis and Dilatometry Services for Screws, Knees, Hips, Spines and Bone Plates.
